## POLSYS Project-Team

### 2.2. Highlights of the Year

- In [4], we obtain an algorithm to solve Boolean systems with an expected complexity of  $O(2^{0.792 n})$  breaking the  $2^n$  barrier.
- In [10], we propose an algorithm to solve a variant of the Quantifier Elimination Problem for which the output formula is *almost equivalent* to the input formula. The complexity of this algorithm is much better than other algorithms and can solve previously untractable problems.
- In [25], we improve the complexity of Index Calculus Algorithms in Elliptic Curves by means of Gröbner basis techniques and we analyze the complexity of this new approach by using the multi-homogeneous structure of the equations.

## **PROSECCO Project-Team**

### **2.2. Highlights of the Year**

This year, we published 5 articles in international journals and 11 articles in peer-reviewed international conferences, including prestigious conferences such as CCS (1), CRYPTO (1), and CSF (2). In addition to these, we published 1 HDR thesis, 3 master's theses, 4 technical reports, and 5 workshop papers. We also have 4 articles already accepted for publication in international conferences in 2013.

We released updates to 3 verification tools and released 3 new software packages. We discovered and reported major security vulnerabilities in dozens of commercial software packages, hardware devices, and websites.

Of our work published in 2012, we would like to highlight the following:

- Our paper in CRYPTO 2012 [22] describing new attacks on cryptographic hardware devices, which got significant interest from both the cryptographer community and from the press.
- Our work on generating implementation code from verified models of cryptographic protocols [26], [27].
- Our work on formally analyzing web application security using automated verification tools, which uncovered major attacks in popular websites and web browsers [21], [24], [20].

**SECRET Project-Team****2.2. Highlights of the Year**

- Extensive study of the hash function proposal Keccak, which has been chosen as the winner of the SHA-3 competition. The analysis of the algebraic properties of Keccak due to C. Boura and A. Canteaut is the best known result on the new hash function standard.
- Design of a variant of the McEliece public-key cipher based on a moderate density parity-check codes (MDPC). This family of codes leads to public keys with a reasonable size and does not weaken the underlying security proof.
- Construction of spatially coupled quantum LDPC codes which performs well under iterative decoding almost up to the coherent capacity of the quantum channel.

## SISYPHE Project-Team

### 2.2. Highlights of the Year

The feedback scheme for quantum systems proposed by Mazyar Mirrahimi and his co-authors have been very successful in some important physical experiments. After the preparation and stabilization of a small number of photons in a cavity in 2011 with the group of Serge Haroche, Nobel Prize for Physics (2012) at ENS Paris ([9], [8], [17]), some new results have been obtained by Mazyar and his PhD student, Zaki Leghtas with the groups of Robert Schoelkopf and Michel Devoret at Yale University [74], [75], [77], [78]. In particular, they have proposed a new method to autonomously correct for errors of a logical qubit induced by energy relaxation. This proposal directly addresses the task of building a hardware-efficient and technically realizable quantum memory.

## **ARLES Project-Team**

### **2.2. Highlights of the Year**

During this year, while we have pursued our research on advanced service-oriented architectures and related middleware solutions for next generation networking environments, we have also made advances over our initial progress in research on several new subjects, called for by the ongoing drastic evolution of the networking environment:

- Dynamic interoperability among networked systems towards making them eternal, by way of on-the-fly generation of connectors based on adequate system models. This research is part of a major European collaborative project within the Future and Emerging Technology program of the EC FP7-ICT (§ 6.2 , § 7.2.1.1 ), which was successfully completed in November 2012 with the highest rating of “Excellent progress (the project has fully achieved its objectives and technical goals for the period and has even exceeded expectations)”.
- Interaction paradigm abstractions and service oriented middleware for choreographies in the ultra-large scale future Internet. This research is also part of a major European collaborative project within the Software and Service Architectures and Infrastructures programme of the EC FP7-ICT (§ 6.4 , § 7.2.1.2 ).
