9.3.4. Museum Exhibitions, Science Festivals and Public Demonstrations

9.3.4.1. Educatec-Educaticice

Kidlearn have been presented on Educatec-Educaticice exhibition the 20,21 and 22 November 2013. This exhibition was held in Paris and grouped together 220 education professional and more than 12000 visitors. It was an opportunity to present Kidlearn project and create contact for potential partnership.

9.3.4.2. Cap Sciences exhibition on “Brain and Cognition”

Cap Sciences is an organization in Bordeaux to promote and to communicate about science to the public. Cap Sciences is preparing an exhibit about the brain starting in February 2013. The Flowers team will contribute to this exposition by setting up a booth to explain the complexity of the processing required for intelligent artificial systems (e.g. robots) to transform observations from the environment to actions done in this environment, such processing being done continuously by all living beings, most notably by nervous systems and brains. To explain this idea, the Flowers team is working on a game for the visitors of the exhibit: a player has to drive forward a mobile robot, specifically an iRobot Roomba, while avoiding obstacles. The difficulty for the visitor in this game is that the player is not able to watch the robot in its environment: the player has to control it using only the sensory-information displayed on a computer screen. The player wins when the robot has traveled a given distance in a straight line and in limited time without bumping into an obstacle. This exhibit will start in February 2013 and last for a year. After that, it may move to different locations. More than 100,000 visitors are expected in Cap Sciences, half of them will come from elementary schools. The data generated by the robot and the visitors will be logged and will be available for research on life long learning with robots.

9.3.4.3. NOVAQT

Poppy and Kidlearn have been presented in the NOVAQT exhibition the 5, 6 and 7 December 2013. This exhibition was held in Bordeaux and brought together a selection of 108 innovations created in the region Aquitaine. It was a chance to present our research to 3 different public: industry, education and general public. Feedbacks were very enthusiastic and we have found several potential collaborations with local actors.

9.3.4.4. Fête de la science

On October 13th, the team organised robotics demonstrations for the "Fete de la science" in ENSTA ParisTech. We demonstrated physical human-robot interaction using the Meka robot, object segmentation and recognition through a Kinect camera and navigation and mapping with a Pioneer robot. Around 300 people participated in the event.

9.3.5. Education towards the younger

The team also initiated the development of educational activities in "écoles primaires" et "collèges" to have kids discover robotics and programming, as well as ran experiments in "école primaires" in Aquitaine to test novel educational software to help children learn mathematics, and developed within the KidLearn ADT project. This was achieved thanks to the arrival of Didier Roy, former math teacher in college, in the team. Our mediation of robotics activities aim primarily at students, teachers and schools. We focused on three approaches :

- A website, consisting of video presentation of researchers Flowers team, news related to robotics , questions / answers, ready activities for teachers for their students , a directory of links, videos, and pages for “robotics in schools stories ” where teachers and students come to post texts, photos and videos to show what happens in robotics in their establishments. A forum is available for researchers to ask questions. We also test robotic kits to be able to provide advices on choices.
- Direct support of schools . For example, we went to Nevers in high school Follereau present what robotics is, interact with students, discuss robotic upcoming events in their school. We subsequently asked to provide technical assistance in the context of robotic operations in the school. We offer activities and we provide technical and educational advice. We move, if needed, in schools or propose meetings by videoconference .
- We formed a working group of a dozen people, most of whom are teachers in primary and secondary and special education (training for disabled adults returning to education) . This group meets regularly to discuss activities, share experiences within schools and consider a robotic curriculum from primary to the end of schooling.

We also participated in Educatec- Educatices event in Paris where education professionals told great interest in robotic activities in education. We participated in the symposium Didactic didapro in Clermont -Ferrand, about mediation of digital sciences . We worked with cluster Aquitaine Robotics to develop a reflection on the teaching of robotics.

In the context of HPC-PME initiative, we started a collaboration with ALGO'TECH INFORMATIQUE and we have organised one of the first PhD-consultant action implemented by Xavier Lacoste led by Pierre Ramet. ALGO'TECH is one of the most innovative SMEs (small and medium sized enterprises) in the field of cabling embedded systems, and more broadly, automatic devices. The main target of the project is to validate the possibility to use the sparse linear solvers of our team in the area of electromagnetic simulation tools developed by ALGO'TECH.

The **HIEPACS** members have organized the PATC training session on Parallel Linear algebra at "Maison de la simulation" in Saclay from March 26th to March 28th. Mathieu Faverge also gave a full day lecture on dense linear algebra libraries at the PRACE Summer School at CINECA.

8.3. Popularization

For a multi-disciplinary team as Mnemosyne, science popularization is not a nice and useful contribution to the dissemination of scientific knowledge but also a necessity since we work with colleagues from bio-sciences with whom sharing profound ideas in computer science is mandatory for a real collaboration.

- Thierry Viéville is half-time involved in popularization actions both at a concrete level [21], [23], [22], [9], [10] (including on Mnemosyne subjects [25], [20] and at the methodological level [15], [29], [18]. This explains the rather huge amount of publications on these external subjects in this document.

9.3. Popularization

Brice GOGLIN is in charge of the diffusion of the scientific culture for the Inria Research Center of Bordeaux. He is also a member of the national Inria committee on Scientific Mediation. He gave numerous talks about high performance computing and research careers to general public audience and school student, as well as several radio and paper interviews about Inria's activities.

Brice GOGLIN and Bertrand PUTIGNY wrote two popularization papers about High-Performance Computing in the Interstices online journal.

Brice GOGLIN and François TESSIER presented research careers at the Aquitec student exhibition.

Paul-Antoine ARRAS, Sylvain HENRY, Bertrand PUTIGNY and François TESSIER gave a hands-on introduction to programming to 30 teenagers at the *Fete de la Science*. Brice GOGLIN was in charge of a numeric science popularization game during that same event.

Samuel THIBAUT presented his research work in a local elementary school.
