9.1.4. Software Dissemination and Internet Visibility

The CONVECS project-team distributes several software tools: the CADP toolbox (see § 5.1), the TRAIAN compiler (see § 5.2), the PIC2LNT translator (see § 5.3), and the PMC model checker (see § 5.4).

In 2014, the main facts are the following:

- We prepared and distributed twelve successive versions (2014-a to 2014-l) of CADP.
- We were requested to grant CADP licenses for 425 different computers in the world.

The CONVECS Web site ⁰ was updated with scientific contents, announcements, publications, etc.

By the end of December 2014, the CADP forum ⁰, opened in 2007 for discussions regarding the CADP toolbox, had over 320 registered users and over 1570 messages had been exchanged.

Also, five large Petri nets derived from our LNT models were provided as benchmark examples for the 2014 edition of the Model Checking Contest.

Other research teams took advantage of the software components provided by CADP (e.g., the BCG and OPEN/CAESAR environments) to build their own research software. We can mention the following developments:

- The IMCReo tool to reason about QoS in Stochastic Reo connectors [58], [59]
- The Alvis virtual machine to execute formal models in the Alvis language [57]
- The Tomte tool for active learning of Mealy machines [30]
- The Vercors platform for verifying the correct composition of distributed components [52]
- The TLM.open tool connecting SystemC/TLM models to CADP [50]
- The REFINER tool for formal Verification of Model Transformations [65], [66]
- The ELOTON development environment for LOTOS specifications [68]

⁰<http://convecs.inria.fr>

⁰<http://cadp.inria.fr/forum.html>

Other teams also used the CADP toolbox for various case studies:

- Model-based specification, implementation and testing of a software bus [61]
- Protocol conformance testing using active learning of Mealy machines [31]
- High-performance fractal coherence [64], [63]
- Verification of models reverse engineered from smart-card readers [34]
